EDUCATION

The George Washington University, School of Engineering & Applied Science

Washington, DC

Master of Science in Computer Science

May 2026

- GPA: 3.77 | Honors: SEAS Merit Award.
- Courses: Neural Networks and Deep Learning, Advanced Machine Learning, Database Systems II, Cloud Computing.

TECHNICAL SKILLS

- **Programming:** Python, SQL, R, HTML, CSS, Bootstrap, Java.
- **Data Science and ML:** Pandas, NumPy, Scikit-learn, PyTorch, TensorFlow, Keras, BERT, CLIP Embeddings.
- **Data Engineering:** ETL Pipelines, Airflow, Docker, BeautifulSoup, Data Validation, FastAPI.
- **Data Visualization:** Exploratory Data Analysis, Tableau, Power BI, Plotly, Matplotlib, Seaborn, Streamlit.
- **Databases and Cloud:** PostgreSQL, MySQL, Google Firebase, Firestore, AWS.
- **Tools and Frameworks:** Git, GitHub, Jira, Salesforce, Microsoft Office, Jupyter Notebook, Google Colab, n8n, fly.io.

RELEVANT WORK EXPERIENCE

Thaddeus Resource Center

USA

Data Science Intern

November 2025 - Present

- Consolidated client data from 5+ sources (surveys, CRM logs, intake forms) into clean, analysis-ready datasets for program evaluation.
- Automated data validation workflows in Python, cutting reporting time by 30-40% across recurring reporting cycles.
- Designed Tableau dashboards that gave program teams real-time visibility into key metrics and participant progress.
- Presented data findings and improvement recommendations to the leadership, driving evidence-based decisions across 3+ active programs.

Wavess

USA

AI Intern

September 2025 - January 2026

- Built an AI-powered sales intelligence tool using Python and OpenAI APIs, automating web collection of hiring trends and customer feedback for 50+ companies.
- Deployed Dockerized n8n workflows with webhook triggers, enabling real-time data refresh without any manual intervention.
- Developed Firebase-authenticated web features using Bootstrap, making internal tools accessible to team members.
- Launched production systems on fly.io with structured error handling, maintaining stable data flow across all sales intelligence pipelines.

PricewaterhouseCoopers (PwC - AC)

Bangalore, India

CRM Intern

February 2024 - August 2024

- Audited and cleaned 10,000+ Salesforce CRM records, improving data accuracy for sales forecasting and reporting.
- Built analytical dashboards for consulting teams, turning raw CRM data into clear insights that shaped client strategy discussions.
- Coordinated cross-team sprint tracking in Jira, improving workflow visibility across 3+ operational groups.
- Authored 20+ QA validation documents that became the standard for data quality checks across reporting cycles.

TECHNICAL PROJECTS

Academic Paper Recommendation System [\[GitHub\]](#)

March 2026 - Present

- Built a hybrid recommendation system using 23.44M papers and 278M citation relationships, combining BERT, Node2Vec, and BM25 to surface relevant research.
- Deployed a full AWS pipeline (EC2 + S3) to process large-scale datasets and added a Gemini-powered learning path that organizes papers by difficulty level.

U.S. Airline On-Time Performance Pipeline [\[GitHub\]](#)

January - March 2026

- Engineered an end-to-end ETL pipeline ingesting US DOT Flight data into PostgreSQL via AWS S3, orchestrated with Apache Airflow for automated refresh.
- Developed a Streamlit app allowing users to compare airlines by route using historical delay and cancellation data across multiple years.

FAERS Drug Symptom Safety Analysis [\[GitHub\]](#)

August - November 2025

- Processed 18M+ FDA adverse event records, standardizing 1M inconsistent drug names using Python and SQL for large-scale safety analysis.
- Applied statistical association mining and dose-response modeling, then built interactive Plotly dashboards to visualize drug-symptom patterns.

Work Authorization: F-1 OPT (STEM) | Authorized to work in the U.S. for 3 years without employer sponsorship | Open to relocate.
